

# Dance of the Neurons: Unraveling Sex from Brain Signals

Mohammad Javad Darvishi Bayazi,  
MohammadSajjad Ghaemi,  
Jocelyn Faubert, Irina Rish

# Introduction

- Dementia research
- Autism Spectrum Disorder
- Structural vs Functional
- Generalization
- Impact on Pathology?
  - Imbalanced data

## Datasets

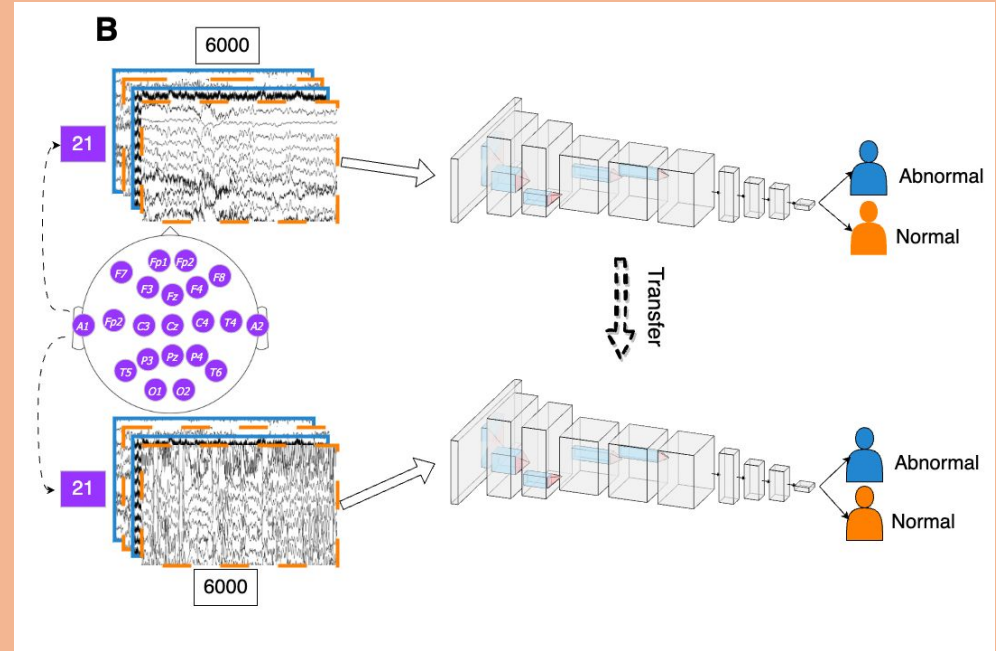

Study	# of Participants	# of Recordings	Conditions	Dataset
<a href="#">Van Putten et al. [2018]</a>	1308 (1000, 308)	1308	All Non-Pathological	In Lab
<a href="#">Bučková et al. [2020]</a>	144	144	MDD	In Lab
<a href="#">Jochmann et al. [2023]</a>	1282 (1140, 142)	1282	Only Non-Pathological Split	TUAB
Ours	2417	2417	Non-Pathological/Pathological	Public-NMT
Ours	2329	2978	Non-Pathological/Pathological	Public-TUAB
Ours	14987	69000	Unlabeled	Public-TUEG

**Table 1.** A comparison of previous studies on EEG sex detection. The table shows the name of the study, the dataset used, the number of participants and recordings in the dataset and in (train, test) splits, participants' conditions, and the data availability.

# Method

- Three EEG datasets analyzed
- Demographic data available
- Preprocessing: artifact removal
- ShallowNet model used
- Training with AdamW optimizer
- Evaluation: BAcc metric
- Focus on sex and pathology
- Robust training methods
- Visualization: AGA technique
- Impact of sex imbalances

# Sex Detectability (SD) in EEG

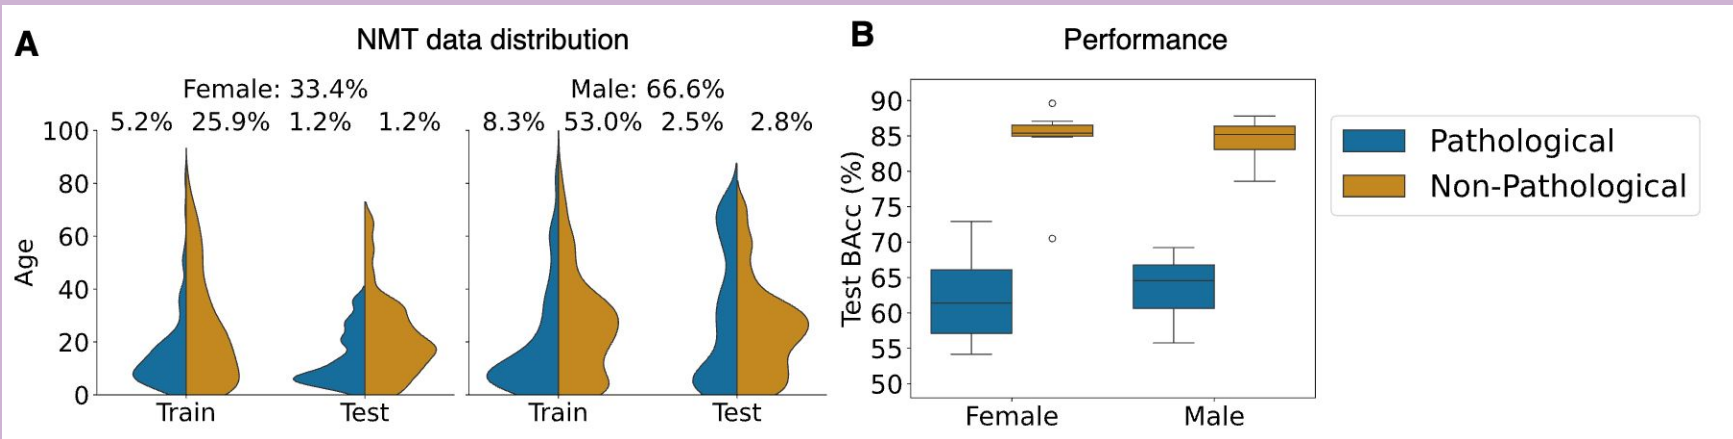

Method	TUAB
Simple CNN on clean data <a href="#">Jochmann et al. [2023]</a>	74.00±02.00
ShallowNet on clean data (Ours)	74.88±01.63
ShallowNet Zero-Shot (Pre-trained-Ours)	<b>75.83±00.80</b>

**Table 2.** Comparison of BAC between previous work on TUAB dataset and ours. Values show mean±SD over 10 randomly initialized models.

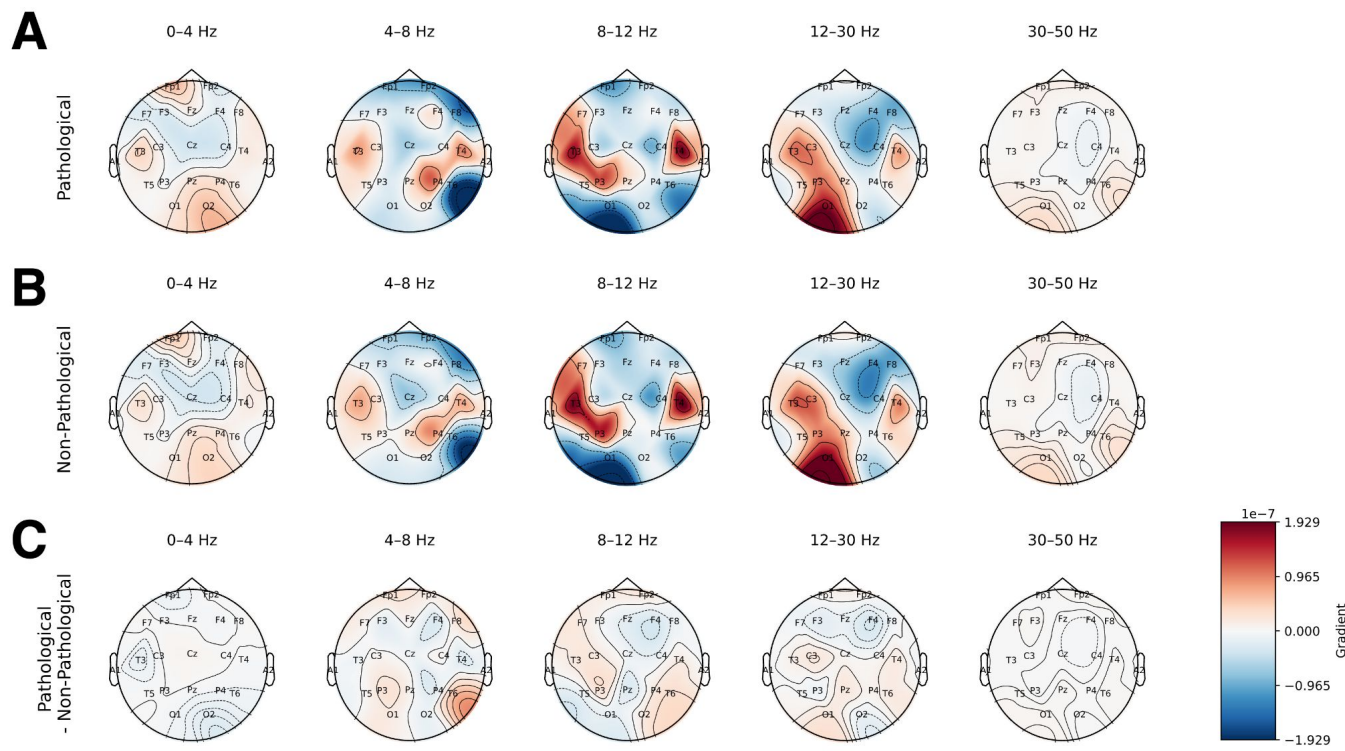

Detectability of sex from EEG signals across three populations: A) Non-Pathological, B) Pathological, C) All Participants. Error bars depict the standard error of BACC across ten random seeds. Notably, the TUEG dataset lacks pathology labels, rendering results unavailable for A and B. Consequently, results for all participants are visualized in C.

# Sex Imbalance's Impact on EEG Pathology Detection

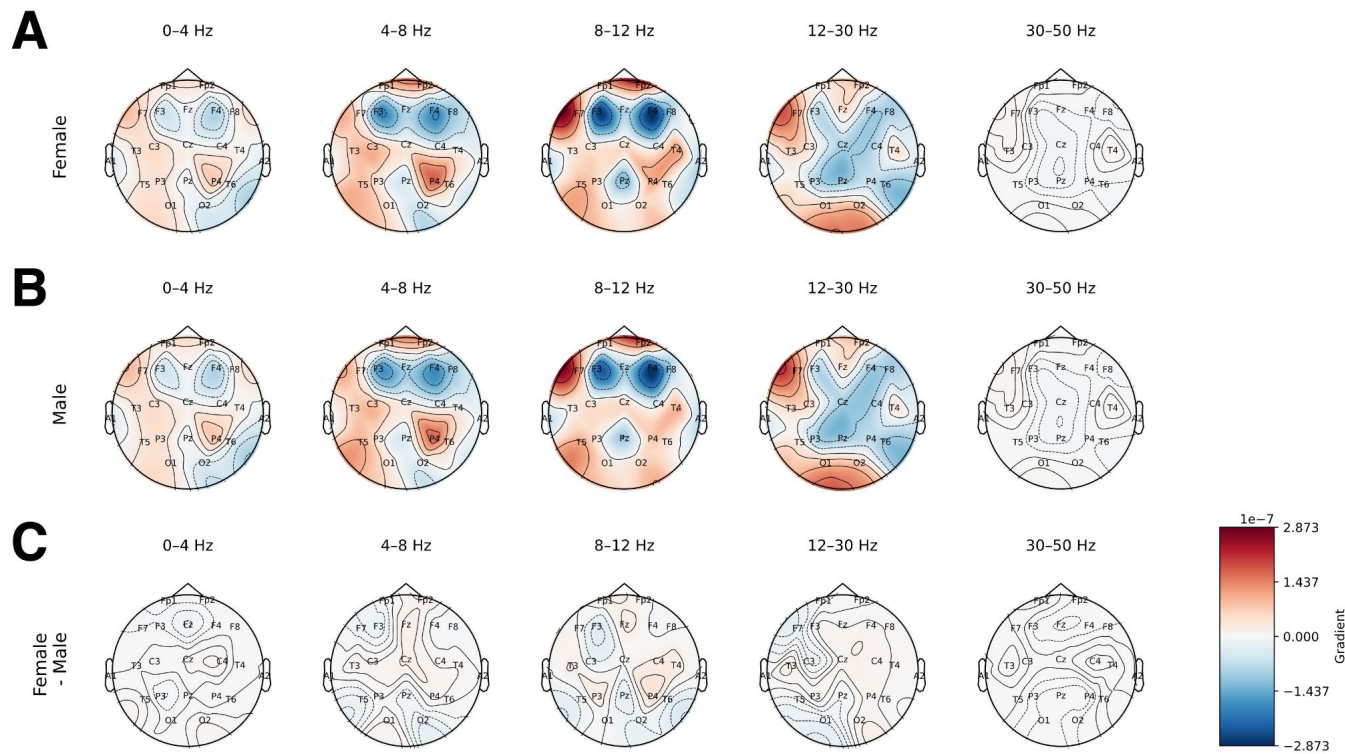

Effect of sex imbalances on pathology detection in the NMT dataset: A) Distribution of male and female samples in the NMT dataset, with the number of male samples being twice as high as that of females. B) Performance (accuracies) of subgroups. The discrepancy in sample numbers does not impact pathology detection.

# Feature importance

Amplitude Gradient Analysis of different frequency bands of sex classifiers on NMT dataset. A) Pathological, B) Non-Pathological and C) The difference between Pathological and Non-Pathological. The red colour indicates a stronger relation with the female class, while the blue colour indicates a stronger relation with the male class.

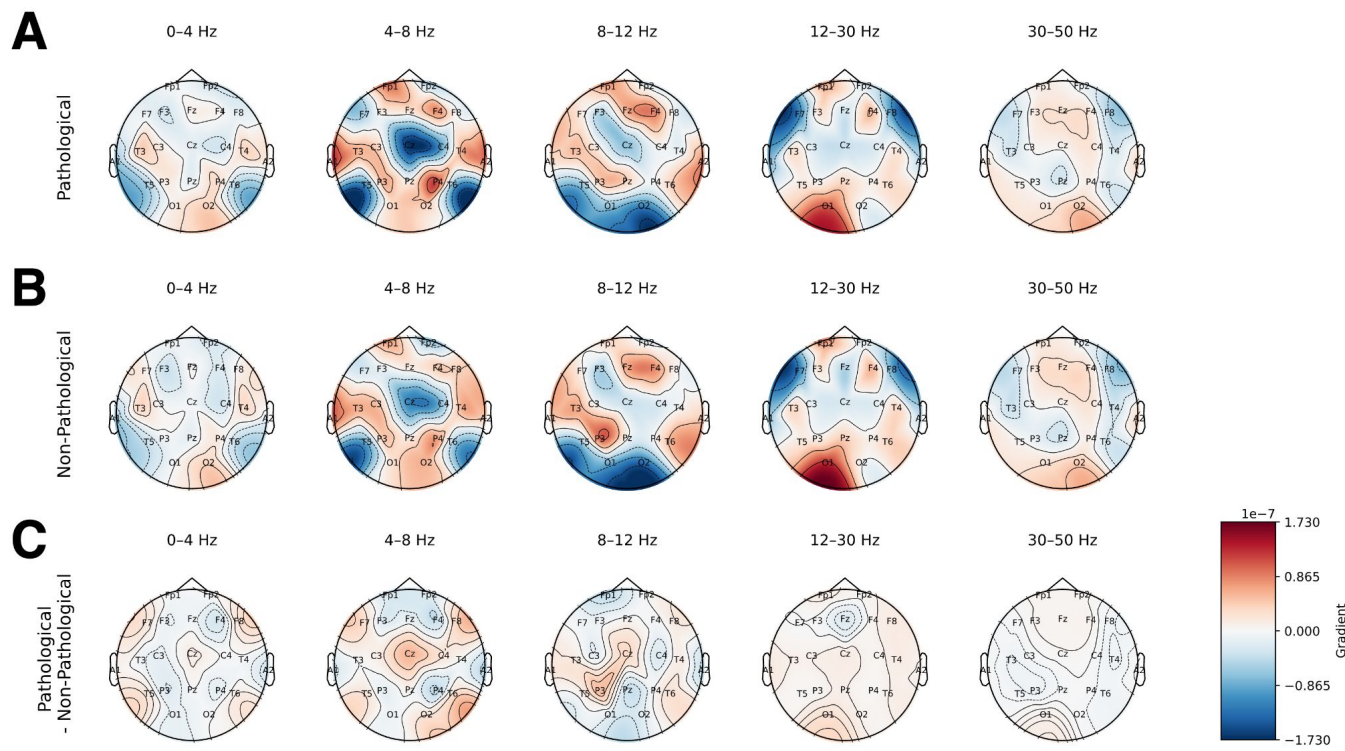

# Feature importance

Amplitude Gradients  
Analysis of different  
frequency bands of  
Pathology classifiers on  
NMT dataset. A) Female B)  
Male C) The difference  
between Female and Male  
class. The red colour  
indicates a stronger  
relation with the female  
class, while the blue  
colour indicates a stronger  
relation with the male  
class.

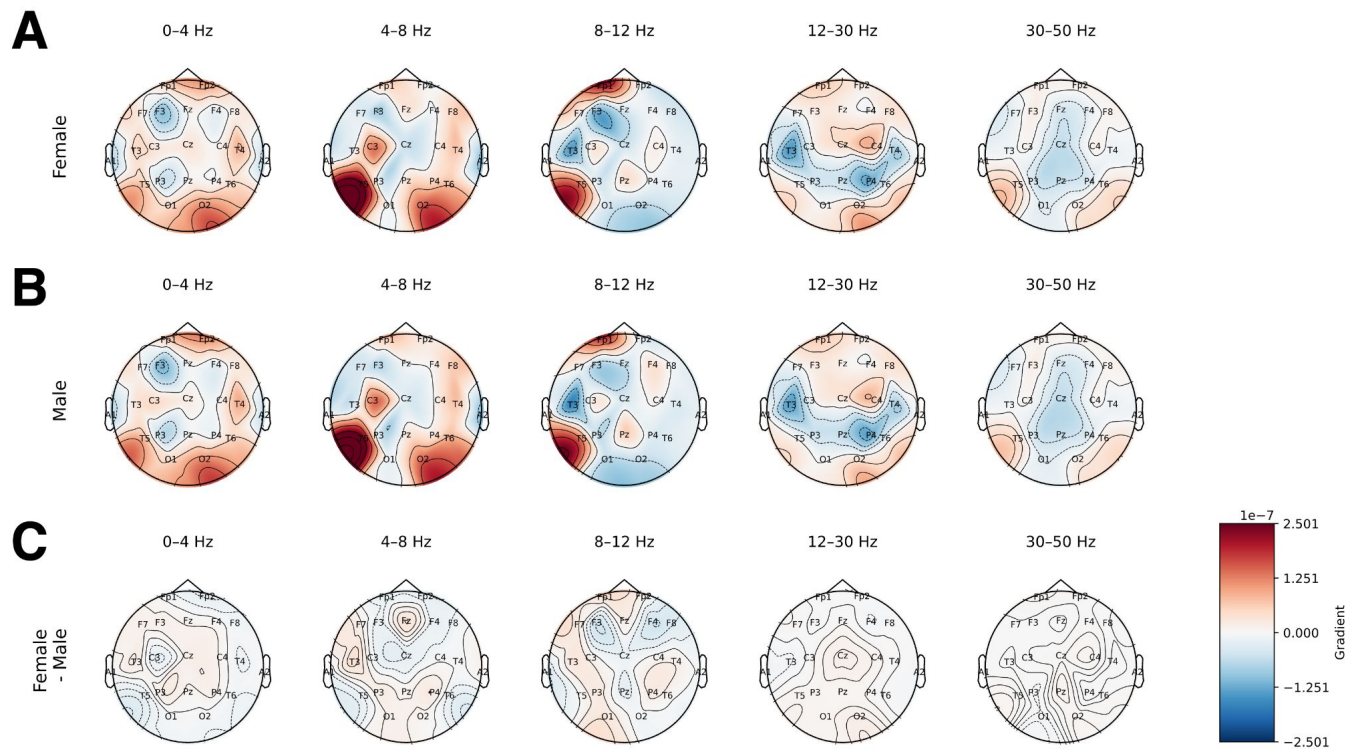

# Feature importance

AGA of different frequency bands of sex classifiers on TUAB dataset. A) Pathological, B) Non-Pathological and C) The difference between Pathological and Non-Pathological. The red colour indicates a stronger relation with the female class, while the blue colour indicates a stronger relation with the male class.

# Feature importance

AGA of different frequency bands of Pathology classifiers on TUAB dataset. A) Female B) Male C) The difference between Female and Male class. The red colour indicates a stronger relation with the female class, while the blue colour indicates a stronger relation with the male class.

# Our Team

**MohammadSajjad  
Ghaemi**

Research Officer & Lead  
at NRC-Fields  
Mathematical  
Collaboration Centre |  
Affiliate Member at  
Acceleration\_Consortium |  
Adjunct Professor at  
YorkU

**Jocelyn  
Faubert**

Full professor and  
directeur adjoint  
(equivalent of vice dean)  
of research and graduate  
studies at the School of  
Optometry of UdeM

**Irina  
Rish**

Full Professor in the  
Computer Science and  
Operations Research  
department at the  
Université de Montréal  
(UdeM) and a core  
member of Mila, Canada  
CIFAR AI Chair
